## **Update on the Release of OSAS 7.6 August 5, 2010**

Open Systems' OSAS Development Team continues to make strides toward the release of version 7.6. We anticipate getting a copy of the "beta" release in mid-August so that we can perform our own testing and internal training on the new features as well as the required installation and upgrade processes. Some of our clients have already requested an upgrade to this release, so we expect to begin the upgrade process for them very soon after receiving the client-installable OSAS 7.6 release.

Check back here for updates on the availability of the OSAS 7.6 version, and contact Adaptive Business Solutions with any questions about feature/functionality or the upgrade process that would be required for your company.
